

LiteParse Sample Document

Demonstrating layout-aware text extraction

This is paragraph one. LiteParse extracts text with bounding boxes for every word on every page. Each character carries spatial coordinates so downstream apps can highlight, search, or build citation links back to the source.

A second paragraph follows. Notice how multiple lines form a single block with aligned margins. Numbers like 1, 2, 3 and symbols like @, #, \$ should be preserved exactly as they appear in the original document.

Key features

- Local processing — nothing leaves your browser
- Layout-aware — preserves positions of every word
- Fast — parses this PDF in under one second
- Open source — Apache 2.0 license

Performance numbers

1. Drop a PDF in the dropzone
2. Click Parse to run extraction
3. Switch to Markdown, Text, or JSON view
4. Copy or download the result

Conclusion. This document is intentionally simple. Real PDFs include multi-column layouts, headers, footer
